U.S. Marine Corps Veteran | 1st Recon Bn (2000–2007) | MARSOC (2007–2013)

CLEARANCE: Active Top Secret / SCI

SUMMARY: IT professional and former Marine Special Operator and Reconnaissance Marine leveraging frontline experience in elite reconnaissance and special operations to support the USMC’S next-generation live training enterprise. As a lead system analyst on SAAB’S MCTIS program, enables high-fidelity, data-driven after-action review for large-scale force-on-force exercises.

TECHNICAL SKILLS

- Endpoints/OS: Windows 10/11; Linux (CLI, basic admin)
- Identity & Email: Active Directory / Entra ID; Microsoft 365 / Exchange Online
- Networking: TCP/IP; DNS; DHCP; VPN; Wi-Fi troubleshooting
- Scripting: PowerShell (basics)
- Tools/Dev: Git; GitHub; Python; C; JavaScript/TypeScript

EXPERIENCE

SAAB Inc. May 2024 – Present

Lead System Analyst | Camp Lejeune, NC

- Spearheaded end-to-end technical execution for 15+ major Marine Corps exercises including the largest MCTIS event to date by designing and deploying 15 fully integrated network architectures that delivered seamless, zero-data-loss connectivity for 2,800+ Marines.
- Directly enabled the first-ever dual-unit MCCRE, powered real-time command analytics, and produced 3 comprehensive After-Action Reports (AARs) used by the Regimental Colonel to refine Tactics, Techniques, and Procedures (TTPs). Enabled objective, data-driven After-Action Reviews (AARs) by fusing live actions with exercise injections giving commanders measurable feedback on tactics and readiness.
- Managed 4,000+ equipment items and created standardized pre-deployment checklists and network templates that reduced setup and troubleshooting time across multiple sites, accelerating mission readiness and improving operational consistency.
- Identified a critical WAN infrastructure flaw that triggered a site-wide correction leading to the centralization and relocation of the network backbone, which significantly boosted system reliability across all Saab operations at Camp Lejeune.
- Authored repeatable SOPs and training frameworks that elevated team proficiency and streamlined large-scale exercise execution earning direct recognition from the Commanding General for quality, operational impact, and contribution to program credibility.

Jacobs Technologies March 2023 – April 2024

IT Support Technician | Camp Lejeune, NC

- Led Tier 1–2 IT support for 300+ personnel, resolving 95% of help desk tickets within SLA timeframes and reducing average resolution time by 30% through streamlined troubleshooting workflows.
- Managed end-to-end lifecycle of 150+ DoD-issued devices (laptops, radios, secure comms gear), ensuring 100% compliance with DISA STIGs, encryption standards, and accountability during audits.
- Automated routine user provisioning and onboarding, cutting setup time from 4 hours to 45 minutes per user and eliminating configuration errors across Windows, macOS, and classified networks (SIPR/NIPR).
- Trained and mentored customers in IT best practices, cybersecurity hygiene, and trouble-ticket documentation resulting in a 40% reduction in repeated incidents.

- Collaborated with network and cyber defense teams to identify and mitigate potential security vulnerabilities reported through the help desk, directly supporting command-wide OPSEC and CMMC readiness.

Raytheon Blackbird Technologies

September 2019 – March 2023

Technical Support Specialist | Camp Lejeune, NC

- Provided frontline technical support for mission-critical surveillance and communications systems used by 3rd Marine Raider Battalion, achieving 95%+ operational readiness across 100+ tactical devices during high-tempo pre-deployment workups and joint exercises.
- Reduced system downtime by 35% by streamlining RMA coordination with OEMs and internal engineering teams expediting repairs for ruggedized surveillance gear, encrypted mobile devices, and edge-computing hardware in austere environments.
- Ensured 100% software license compliance and audit readiness for classified SOF programs by maintaining accurate inventories of commercial and government-off-the-shelf (COTS/GOTS) applications across tactical networks.
- Developed and delivered hands-on technical training and quick-reference guides for 150+ Raiders and enablers, cutting repeat support requests by 50% and accelerating user proficiency with advanced surveillance and mobile ISR tools.
- Served as trusted technical liaison between warfighters and Raytheon engineering teams, translating operator feedback into actionable improvements for fielded systems directly enhancing usability, reliability, and mission effectiveness in real-world scenarios.
